PROPOSED RECLAMATION

As per your notice of noncompliance, dated July 1, 1997, and received by me on July 2, 1997. Please find the following proposed reclamation procedures.

The original contours will be reestablished with the use of prior existing photographs of the preexisting work sites that were disturbed by the use of a

backhoe/loader. A backhoe/loader will be used to conduct any and all reclamation requirements, to establish as close as possible the original contours of said disturbed areas.

Pending approval from the BLM, all reclamation should take about one week.

During our on site field inspection of the aforementioned disturbed area's, with Mr. Bill Stringer and Mr. Rich McClure of the Moab BLM. Mr. Stringer stated that he wasn't sure how he wanted certain area's reclaimed. As of this time we have not received any word or documentation as to the specified requirements set forth by the BLM, as to each disturbed area.

Pending further instruction from the BLM and Mr. Stringer, as per site specific requirements in regards to reclamation will ensure the suggested deadline of November 1, 1997.
